

## Admission in the university

```
#include <stdio.h>
```

```
#include <conio.h>
```

```
struct student {
```

```
    int id;
```

```
    int a;
```

```
    int m;
```

```
};
```

```
typedef struct student
```

```
int main()
```

```
{
```

```
    int i, n;
```

```
    printf("enter the number of students: \n");
```

```
    scanf("%d", &n);
```

```
    struct student st[n];
```

```
    for (i = 0; i < n; i++)
```

```
    {
```

```
        printf("enter the student ID \n");
```

```
        scanf("%d", &st[i].id);
```

```
        printf("enter the age of the student ID: %d \n", st[i].id);
```

```
        scanf("%d", &st[i].a);
```

```
        if (st[i].a <= 20)
```

```
            printf("not eligible for admission \n");
```

```
        else
```

```
            printf("your entry has been recorded \n");
```

```
            printf("enter the marks of the student ID: %d \n", st[i].id);
```

```
            scanf("%d", &st[i].m);
```

```
            if (st[i].m < 65)
```

```
                printf("not eligible for admission \n");
```

```
            else
```

```
                printf("your entry has been recorded \n");
```

```
        } }
```
